Ramp Hiring Team

Dear Ramp Hiring Team,

I'm excited about Ramp because it sits exactly at the intersection I care most about: high-stakes, data-dense problems and interfaces that real people have to trust and use every day. My background blends frontend engineering, UX/UI design, and years in sales and operations, so I naturally think about products in terms of conversion, clarity, and real business impact.

Before engineering, I spent nearly a decade in sales, operations, and client-facing roles. That time hard-wired me to care about the functional side of design: does this flow remove friction, earn trust quickly, and move someone confidently to the next step? That perspective now shows up in how I build: I'm deliberate about structure, copy, interaction pacing, and visual hierarchy because I've watched small experience details make or break outcomes in the field.

As a frontend engineer, I've been focused on React, Next.js, and TypeScript, building interaction-heavy products like GoCart, a full e-commerce platform with separate buyer and seller flows, and Glitter, a social product with messaging, notifications, and an integrated AI assistant. In both, I owned the frontend architecture and UX: designing role-aware dashboards, performant layouts, and interfaces that stay responsive under real usage, not just ideal demos. My work at Litty Co. extends that to full brand systems, tying together web, visual identity, and content so each surface feels coherent and intentional.

Ramp's focus on building smart infrastructure for finance teams, embedded directly in the transaction flow, is exactly the kind of environment where I want to apply that mix of experience. The idea that a UI decision in a spend dashboard, approval flow, or risk surface can directly change how a finance team runs their week is deeply motivating to me. I'm especially drawn to your emphasis on web performance, industry-leading UX, and the ownership to build systems that scale across billions in spend.

I'd love to bring my frontend engineering skills, UX and visual instincts, and sales-driven understanding of user behavior to Ramp, helping design and ship interfaces that are fast, trustworthy, and functionally sharp for the teams relying on them every day.

Sincerely,

Justin Henry
